

# Capability statement

Sociotechnic Solutions Limited is an independent consultancy specialising in the design and optimisation of complex sociotechnical systems.

Applying innovative tools from human factors, ergonomics and cognitive systems engineering, an emphasis is placed upon improving system capability, efficiency and safety.

System development is considered more than training, product development, or Human Machine Interface (HMI) design. A holistic approach is taken considering the functional, structural, social, and physical aspect of the domain in question. By expanding the analysis to consider the team,

organisation and the wider domain, additional possibilities for system optimisation are exposed – leading to flexible systems, equipped to cope with complex dynamic environments.

Experience is held in applying these tool and techniques to a wide range of domains for a number of FTSE 100 companies. With a background in Defence (holding UK security clearance), Aerospace, Automotive Design, Rail and Manufacture, Sociotechnic Solutions offers breadth and depth of experience in Human Factors, Design, Engineering, Manufacture and Project management.
